HONEY-TRAP SYSTEM
ACTIVE DIRECTORY
DOMAIN CONTROLLER
SECURITY GROUP
OU

Name :- Zeel Kotadiya

Project :- HoneyPot – SentinelPS

Attack Type :- HoneyPot

HoneyPot - SentinelPS

Project Overview

- SentinelPS is a lightweight, PowerShell-based cybersecurity framework that uses deception techniques to detect unauthorized access in real time. It deploys fake user accounts and monitored Logs inside a Windows environment - and the moment an attacker interacts with either of them, the system instantly generates an alert and logs the event.

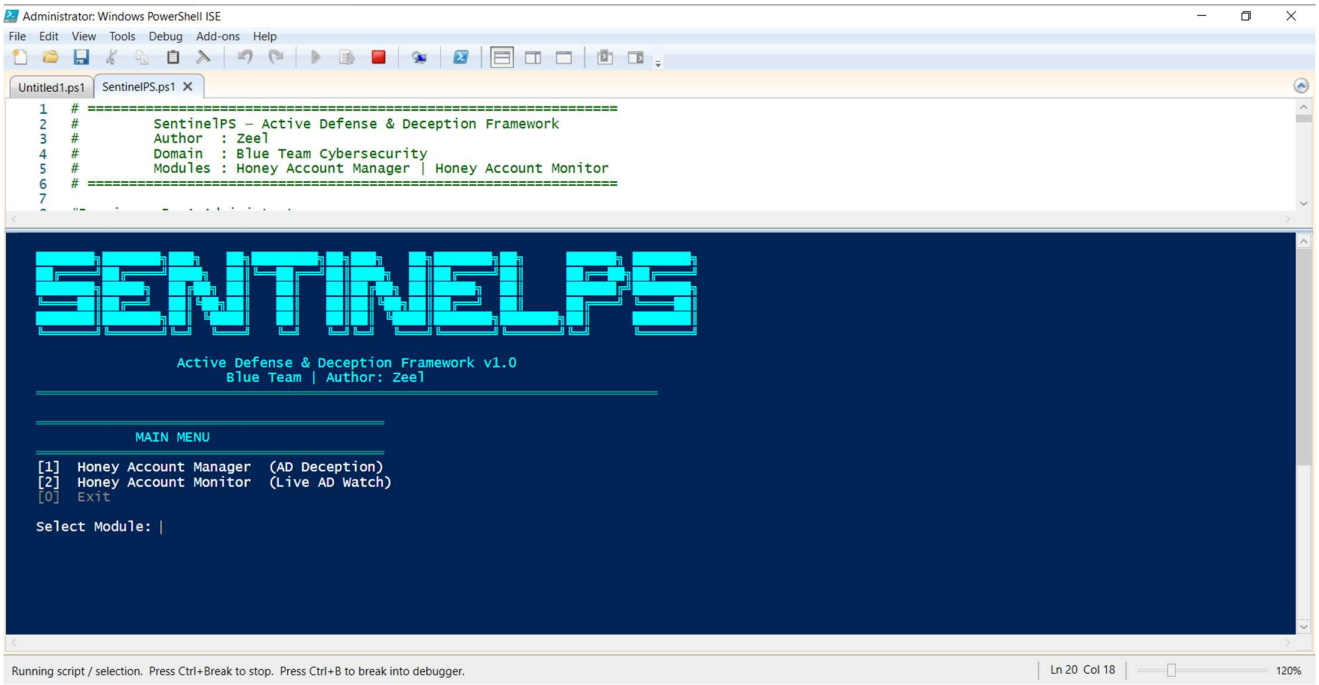
- The framework was built and tested in a two-VM lab setup using Windows Server 2019 and Kali Linux, with no third-party tools required - only native PowerShell and Windows Event Logging.

Requirement :-

Windows Server

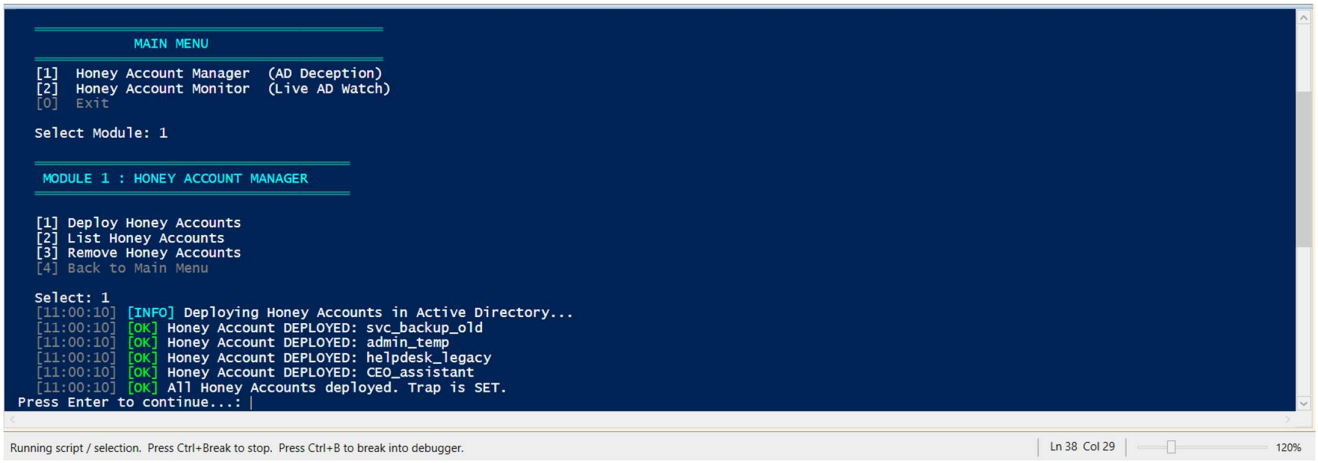
Attacker machine (Linux)

Run the Script



Select 1 For Account manager

Then Select 2 For Deploy Honey Account in AD



Verify the Honey accounts In AD

nd Comp

ers
rincipals
e Accoun
